

PRISM — Financial Planning & Reporting Tool

A single-file, browser-based FP&A workbook that turns monthly actuals, plan and operating data into consolidated management reports — built for a multi-channel lending business.

Illustrative data throughout

WHAT & WHY

What it is — a self-contained reporting workbook that opens directly in a browser. No install, no server, no infrastructure to run.

The problem it solves — monthly financial and operating data comes from several disconnected sources; pulling it together consistently for management review is slow and error-prone when done by hand.

WHAT IT STANDARDISES

- Actuals, plan/forecast & KPI data into one structure
- Channel-level and consolidated profitability
- Actual-vs-plan and period-on-period variance
- Recurring management & leadership reporting

Data handling. All loading, calculation and rendering happen locally in the user's browser. Financial data is never transmitted to an external server as part of normal use — the file can be shared safely once loaded with a business's own data.
